Flexibility and workability in one from Ultra Tile

Ultra Tile manufacture a comprehensive range of cementitious wall and floor tile adhesives. ProFlex SP+ES is their extended set single part flexible floor and wall tile adhesive, suitable for interior/exterior use and wet and dry conditions. Specially formulated with extended workability for large format and intricate porcelain, ceramic and natural stone tile work, with exceptional adhesion and flexural capacity, it is ideal for situations where vibration may occur.

Ultra Tile ProFlex SP+ES conforms to BS EN 12004 C2ET and BS EN 12002 S1, is polymer modified and can be used in conjunction with underfloor heating systems. The product has an application thickness of 3-20mm and is ready to take light foot traffic 16 hours after application.

The adhesive's unique qualities make it ideal for fixing tiles to most common building substrates including concrete/sand render, screeds, brick and block work, heated sub-floors, existing tiled surfaces and overboarded wooden floors.

Ultra Tile ProFlex SP+ES is perfect for conservatories, showers, saunas and swimming pools.

For further information on Ultra Tile ProFlex SP+ES, please visit www.ultratileadhesives.co.uk, or call 01827 871871.
